## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 5-6, 10-12, 14, 17, 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Miller or Lawson.

Regarding claim 1, 9, 11-12, 17, 19 both cited art disclose a pass through seat restraint tension sensing assembly with features of the claimed invention including a an upper and a lower housing at least one spring means disposed in the housing a hall effect sensor and a movable actuator in cooperation with a belt webbing and the spring to indicate the tension (see figures 1-4 on both art).

Regarding claim 5,14, the spring is a coil spring.

Regarding claim 6, 17, both art show that the housing have cavities.

Regarding claim 8, both art show that the actuator have similar configurations.

Regarding claim 10, the housing have projections (see, for example, figure 2 of Lawson).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-4, 7, 13, 15-16, 18, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Miller or Lawson.

Regarding claims 2, 7, 13, and 20, the cited art do not specifically recite a plurality of spring means or plurality of magnets. It would have been obvious, however, to one having ordinary skill in the art at the time the invention was made to modify the cited art to add as many springs or magnets as desired for general enhancement. Moreover, since they both show all the fundamental features of the claimed invention, the use of plurality of claims elements as opposed to only one fails to provide for an unobvious advantage or patentable distinction.

Regarding claim 3-4, 15-16, 18, it would have been obvious to one having ordinary skill in the art at the time the invention was made to place the spring in locations in order to have the most effective uniform effect.
